AI Quality Agent — live console

https://sanket-dhamke.github.io/sanket-qa-portfolio/index.html

A live console built from scratch to demo an AI agent for quality automation: 24/7 monitoring, performance, application health, scheduled runs, and chat for status or any security issues. Personal DataHub OSS demo — not an employer product.

Not QA-only: the same approach can work like a product for a customer — feature-specific actions, performance, security, onboarding, or any question — with RCA to resolve issues, not only detect them.

- Built from scratch: AI agent for quality automation
- 24/7 live + performance monitoring, application health, scheduled runs, and email preview
- Chat: ask current status of the application; any security issues; any performance issues; run an existing feature the way a customer would (example: ingest a Postgres database and provide the YAML recipe)
- Security: checks the code at a known version and the running app after Connect (unauthenticated APIs, secrets in logs). Same chat/RCA as performance
- This agent can be configured for any product

SUMMARY

Lead Automation Engineer with 12 years in QA automation, focused on AI-enabled testing. At BMC I built a hybrid AI-assisted testing agent for Beacon: Playwright for UI, Python/pytest for API, rule- and regex-based routing, a repository-derived JSON API catalog, and Python execution of supported operations. The live console above is the clickable proof of that pattern — performance, API, UI, and agentic execution. I design UI and API automation in Python, Playwright, and Selenium; work with AWS, Kubernetes, and Docker; and use execution evidence to investigate failures and validate metadata ingestion and governance.

WORK EXPERIENCE

Lead Automation Engineer, R&D

Feb 2023 – Sep 2026

BMC Software · Pune, India

- Engineered a hybrid AI-assisted Beacon testing agent using Playwright for UI automation and Python/pytest for API automation.
- Designed the hybrid agent (router, handlers, cited RCA) so the same pattern can report security findings — API auth and secrets in logs — not only performance or OOM.
- Instituted rule- and regex-based request routing: P0/P1 requests execute predefined workflows; other supported requests use a repository-derived JSON API catalog to resolve API details and run operations in Python.
- Developed monitoring workflows that aggregate Kubernetes/Docker pod CPU and memory utilization and surface execution and status results.
- Validated Beacon/DataHub metadata ingestion and governance — domains, tags, structured properties, dataset/table and column-level lineage, and data-quality workflows — including stored-procedure lineage where connector configurations support it.
- Investigated ingestion and pipeline failures from execution status, logs, and lineage context to support defect triage and root-cause analysis.
- Validated Helix Edge sensor-data ingestion through remaining-life assessment and service-or-replace outcomes, including API and scenario validation.
- Tested Control-M Data Assurance data monitors, source connections, monitor rules, and data consistency across streaming and database-backed workflows; conducted functional, integration, and regression testing.

Senior SDET, Central Automation Team

Jul 2021 – Jan 2023

ACI Worldwide · India

- Directed automation efforts across multiple product groups, turning requirements into maintainable, reusable automated test suites.

Sanket Dhamke Lead QA Automation Engineer

EARLIER EXPERIENCE

Automation Engineer (MTS)
Aug 2017 – Jun 2021

TIBCO Software · India

- Architected a Selenium/Python UI automation framework integrated with Jenkins for automated execution on each build.
- Automated batch workflows for BW Design Utility and PDMS reports, and validated Docker-based deployments.

Associate SDET
Oct 2015 – Aug 2017

Dell EMC · India

- Developed pytest automation for backup/recovery REST APIs; supported Nagios health monitoring, test planning, test data management, and defect tracking.

QA Intern
2014 – Oct 2015

TomTom · India

- Built Java/JBehave acceptance automation and used Jenkins, Maven, and Serenity.

SKILLS

AI & AGENTIC

Hybrid AI testing agent · Agent workflows · smoke / sanity / regression · Rule-based RCA · AI-enabled testing · Lead SDET

SECURITY

Security testing · Code scan · Running-app scan · API authentication checks · secrets in logs

AUTOMATION

UI automation · API automation · Performance testing · Python-based API execution · Playwright · Selenium · pytest · REST APIs · Allure

LANGUAGES & METHODS

Python · Java · JBehave · BDD · JSON · Integration testing · Regression testing · Test planning

PLATFORM

AWS · IAM · S3 · EC2 · Kubernetes · Docker · Linux · Jenkins · Git · Nagios · Performance monitoring

EDUCATION

Fergusson College / Pune University — M.Sc. Tech, Computer Science, India 2011 – 2014

D. Y. Patil College / Pune University — B.Sc., Computer Science, India 2008 – 2011
